

Team Status Report 6

Goals:

- Implement additional features
- Discuss Design Ideas and how to implement functionalities
- Continue working on CSS designs for website
- Update Trello Workspace

I made good progress this week on our software. I created the search function for our software that allows the user to search for posts based on keywords. The search bar is located in the navbar in the view kiwis page.

Our tasks for the coming week are going to be crucial. We need to begin implementing the other additional features we talked about and there is still terrible communication between members of our team. There needs to be a better response to people who have a question or to any issues that may occur with the software. It is unacceptable to continue to ignore messages.

Our goals as a team were to implement the additional features this week for our software. There has still been some trouble with communication and people not testing code to make sure there are no errors. Hopefully this can be resolved before the next milestone and we will come together to have a better product.
